HIGHLIGHTS

I am a results-driven Software Engineer with over **5 years of experience** in delivering impactful projects. My expertise in **JavaScript, Typescript, ReactJS, NodeJS**, and **Rails** along with a strong foundation in **Mathematics**, enables me to solve complex problems and collaborate effectively across teams. Key accomplishments include:

- **Contributed to fraud prevention and risk management at Shopify**, developing tools to **identify and prevent fraudulent activities**.
- **Analyzed and proposed solutions** to enhance fraud prevention strategies at Shopify.
- **Led the development of user interaction features** at Browse AI Inc., including the **DOM Mirroring Robot Studio**.
- **Utilized AI** to scrape data from websites and extract information.
- **Redefined the User Data Archiving Panel** at Divar, significantly improving fraud management and increasing speed.
- **Streamlined release processes** and automated deployments, enhancing overall efficiency.
- **Enhanced website security** by establishing nginx with CSP headers and caching mechanisms.
- **Developed key features** such as an offline page and an automatic release announcement system.
- **Reduced bundle size** through impactful contributions to buf.
- **Mentored a team of 5 engineers**, fostering growth through regular one-on-one sessions.
- Migrated build tools at Balad, cutting build time from **70 seconds to 600ms**.
- Enhanced user experience by optimizing First Contentful Paint (FCP) from **2.4 seconds to 1.5 seconds**.
- Decreased CI/CD build time at Cafe Bazaar from **14 minutes to 3 minutes**.

LATEST PROFESSIONAL EXPERIENCE

Senior Software Engineer

July 2024 – Present 📅

Shopify

Vancouver, BC, Canada 📍

As a member of the Platform Risk team, I focus on reducing losses to fraud by leveraging various strategies to deter fraudulent activities and mitigate associated risks. My key contributions include:

- As part of the team, I contributed to the introduction of **Identity Verification (IDV)**, which significantly increased fraud deterrence.
- Conducted in-depth research to identify **patterns of fraudulent behavior**, leading to the implementation of strategic roadblocks that mitigated risks and improved platform safety metrics.
- Created various scripts to scrape data from different systems for data analytics, enabling the cross-checking of identities and facilitating **signal-based decisions** that enhanced fraud detection capabilities.

EDUCATION

🎓 Bachelor of Science in Computer Engineering

Imam Khomeini International University
2017 – 2022

TOP SKILLS

Frontend

TypeScript • React.JS • Remix • Vite • Ruby • Next.js • VueJS • HTML • CSS (SASS) • SvelteJS

Backend

Node.JS • Express • Rails • MongoDB • MySQL • Web3.JS • Solidity • AWS

Tool

Docker • CI/CD • Git • Babel/Webpack • Puppeteer • Electron.JS • Vitest

Other

Unit Test • IoT • Security • Scrum • Agile • Systems Design • Algorithms • GraphQL

FORMER PROFESSIONAL EXPERIENCE

Senior Software Engineer, Full-Stack

Vancouver, BC 📅

Browse AI Inc.

Sept 2023 - July 2024 📍

At BrowseAI, I'm pioneering the simplification of website scraping through user-friendly and advanced technology. As a Senior Product Engineer, I've been instrumental in:

- Leading the development of the **DOM Mirroring Robot Studio** feature, allowing users to interact with and extract data from mirrored websites seamlessly. (Using React as the front-end and NodeJS + TS for the backend and using AWS Fargate and Lambda as the infrastructure)
- Innovating an **AI robot trainer tool** that intelligently extracts data from websites based on the description of the desired information.
- Enhancing our hiring process by designing and implementing an **interview framework** for Product Engineers, and conducting interviews with candidates worldwide.

My role at BrowseAI is a blend of technical innovation, team leadership, and strategic hiring, all aimed at making data extraction more accessible and efficient.

Chapter Lead, Front-End Engineering

Iran 📅

Divar

Nov 2022 - Sept 2023 📍

As the Chapter Lead of Front-End Engineering at Divar's Backoffice, I'm at the helm of the engineering team for one of the leading platforms for buying and selling used items in Iran, with **40+ million active users**. My role involves not just streamlining operations, but also ensuring our services remain efficient, secure, and user-friendly.

- Led the **Redesign of User Data Archiving Panel**: Successfully led the rebuild of our primary user data archiving panel, critical for aiding operators in managing user reports, preventing fraud, and resolving user issues. The rebuild was executed with modern technologies such as React, React-Query, TypeScript, S3, and gRPC.
 - Streamlined **Release and Deployment Process**: Set up semantic-release to automate our release process and generate structured release notes. Enforced the use of commitlint and commitizen to ensure standardized MR titles, resulting in a readable commit history of the main branch and release notes. Additionally, I built a system that provided each branch with a dedicated staging area using S3 buckets.
 - Enhanced **Website Security and Reliability**: Established nginx with properly configured CSP headers to protect against security vulnerabilities such as XSS attacks. Introduced nginx caching to guarantee uninterrupted service in case of potential S3 downtime.
 - Introduced **User-Friendly Features**: Developed an offline page using a Service Worker, enhancing user experience even when offline. Created an automatic release announcement system to keep users informed about new updates and features.
 - Optimized **Bundle Size**: Made significant contributions to buf to improve tree shaking and remove unused items, resulting in an important reduction in our bundle size.
 - **Leadership and Team Development**: Guided and led a team of **5 engineers**, incorporating regular one-on-one sessions to ensure the team's continual growth and progress.
-

Senior Software Engineer, Front-End

Iran 📅

Balad Maps & Navigation

May 2022 - Nov 2022 📍

During my time at Balad Maps and Navigation, I played a pivotal role as a Senior Front-End Engineer. Balad is Iran's most downloaded maps application, boasting over **10 million active monthly users**.

- Interviewed numerous candidates at various stages of the hiring process.
- Mentored junior engineers and provided guidance to support their growth.
- Migrated the build tool for our Business Panel Project from Preact-CLI to Vite, reducing the build time from **70 seconds to 600ms**.
- Optimized **First Contentful Paint (FCP)** from **2.4 seconds to 1.5 seconds**.
- Collaborated with a feature team to complete numerous tasks and develop new features.

Unfortunately, Balad faced economic challenges and had to lay off **84% of its workforce**, including myself. The startup later decided to shut down operations by the end of the Persian year. Despite these setbacks, my time at Balad was marked by significant growth and contributions to the company.

Senior Software Engineer, Front-End

Iran 🇮🇷

Cafe Bazaar

Nov 2018 - Mar 2022 📍

Cafe Bazaar is the most famous Iranian Android marketplace with **+45 million users**. I joined the team of our biggest panel with **+22,000 customers**, managing to fix the majority of our hidden bugs through monitoring them on Sentry as a maintainer.

- Managed to reduce CI/CD build time from **14 minutes to 3 minutes**.
- Developed and maintained a couple of open-source projects on the company's Github for the first time in the chapter.
- Interviewed over **100 candidates** for the Front-End Engineer position.
- Contributed to the interview process by creating contests and improving questions, resulting in a **10% accuracy rate**.
- Led the chapter of the panel through a roadmap to achieve a more performant and maintainable codebase.
